- g) Candidates who are successful in ADÜYÖS can apply for ADÜYES using this exam result (Method 1).

#### 5.2.12. ADÜYÖS Evaluation

- a) The calculation of ADÜYÖS marks shall be carried out according to the “Basic Academic Skills Test”
- b) In the evaluation of results obtained from the examination, the Item Response Theory (IRT) will be used. With IRT models, in order to determine the real mark in the assessment and evaluation area, calculations shall be carried out according to the principles of the individual’s abilities ( $\theta$ ) and answers given to the questions. According to IRT, the contribution of each question to the total score to be obtained from the whole test is different. After the examination, each question shall be scored according to its difficulty, discriminatory index and chance of correct response. Therefore the point value of individual questions is different to the other questions. For this reason, **difficult questions** will gain a candidate more points than **easier questions**.

After determination of the model to be applied, the real mark of each individual will be ascertained. The obtained mark shall be subject to percentage conversion and the ADÜYÖS standard score shall be determined. As a result of the analysis of these points, a decision will be taken as to which model will be used. After determination of the model to be used, the real mark of each candidate will be determined. The mark will be subject to percentage conversion and the

ADÜYÖS standard score will be determined. The evaluation model used in the examination will be announced with the ADÜYÖS standard score.

<u>1 Parameter Logistic Model</u>	$P_{ij}(\theta_j, b_i) = \frac{\exp \exp (\theta_j - b_i)}{1 + \exp \exp (\theta_j - b_i)}$
<u>2 Parameter Logistic Model</u>	$P_{ij}(\theta_j, b_i, a_i) = \frac{a_i(\theta_j - b_i) ]}{1 + a_i(\theta_j - b_i) ]}$
<u>3 Parameter Logistic Model</u>	$P_{ij}(\theta_j, b_i, a_i, c_i) = c_i + (1 - c_i) \frac{a_i(\theta_j - b_i) ]}{1 + a_i(\theta_j - b_i) ]}$
<b>Explanations :</b> $\theta_j$ : Individual talent, real mark, $b_i$ : article difficulty parameter, $a_i$ : discrimination parameter, $c_i$ : pseudo-guessing parameter	

c) Correct and incorrect answers given by the candidate will be evaluated separately. For every incorrect **4** answers, the candidate's ADÜYÖS mark will be decreased by **1** standard point.
